Form 23 Conical cup with smooth vertical rim Konische Schale mit glattem Steilrand Coppa troncoconica con orlo verticale Coupe tronconique à rebord vertical lisse

Conical cup representing the further evolution of Form 22. The floor is now always flat or biconical (meeting the wall at a sharp angle on the inside), usually with a low foot.

- Plain tapering rim, inclined slightly inwards, sometimes bearing applied decoration.
- 23.2: Rim with flat outer face bearing applied decoration bounded above and below by simple convex mouldings; inner face plain or with a groove at lip.

#### Production

Subform 23.1 is probably made in many parts of Italy; examples in Padana ware do not show applied decoration. Subform 23.2 is made in Italy but apparently not in the Padana region.

#### Date

Subform 23.2 belongs to the second and third quarters of the first century A.D.: it is common in the South Stoa deposits at Corinth and at Pompeii. Subform 23.1 is less readily datable as it may occur as a simplified version of Form 23 or Form 23: other features of the vessel (e.g. foot-profile, decoration) may provide a clearer indication of date than the shape of the rim.

#### Distribution

Subform 23.2 is very common throughout the Mediterranean region, with sporadic examples found in the North and in North-Italy: Subform 23.1 is relatively uncommon.

# Information Extraction

# Relation Extraction

The most common approach is to look for certain relation triples in the text.

# Stanford CoreNLP: Output

Subform 20.1 is never common, but has a long history from the Augustan period until the late Tiberian or early Claudian period.

## results in

```
have history until: Subform 20.1, late tiberian
```

have history until: Subform, tiberian

have history until: Subform 20.1, tiberian

have history until: Subform, late tiberian
